5.3	Hybrid	5

1 About the XXLMEM node

Since November 2018, occigen has been integrating a Bull x808 node with:

- 3TB of RAM accessible in NUMA (glueless interconnect) by 8 sockets Intel® Xeon® Platinum 8176 (224 cores total).
- 2 Nvidia GPU Tesla P100 (12GB).

Here is the simplified representation of this node:

2 Get the access

Access the node via Slurm, by adding constraint `-C XXLMEM` in your submission script.

Here are some examples of how to use such a machine:

- large memory or non-optimal jobs on thin nodes
- production / processing of images, meshes and data analysis outside interactive visualization
- Proof of Concept: GPU software testing not used in a production mode

Note that in the same batch job, you cannot request this SKYLAKE node together with other HASWELL, BROADWELL, or visualization nodes.

3 File systems

This node can access 4 disk spaces:

- \$HOME
- \$SCRATCHDIR
- \$STOREDIR
- /tmp

A full description of the three first file systems can be found [here](#)

/tmp is local and take advantage of SSD disks. This volatile workspace can make you benefit of a high performance 1.2TB storage.

Warning: this workspace is not defined to store data on a long term. If you want to keep your data between jobs, please use secured filesystems as \$HOME or \$STOREDIR.

4 Module

Software environment: module

CINES enables the use of multiple softwares on its clusters, with multiple versions.

To avoid conflicts between different versions of the same software, we usually need to define a specific environment for a given version.

Available softwares can be handled using the following commands:

module avail	show the list of available softwares
module load	load a software to your environment
module list	list the loaded modules
module purge	remove all loaded modules
module show	show information of the module

Si vous ne trouvez pas le logiciel dont vous avez besoin dans la liste, [contactez nous](#).

5 Usage modes

The node can be used in three different ways:

- MPI only
- OpenMP only
- Hybrid MPI+OpenMP

Example scripts are available in the following sections.

5.1 MPI

```

#!/bin/bash
#SBATCH -J xxlmem_mpi
#SBATCH --nodes=1
#SBATCH --ntasks=224
#SBATCH --ntasks-per-node=224
#SBATCH --time=0:40:00
#SBATCH -C XXLMEM
#SBATCH --exclusive
#SBATCH --output xxlmem_mpi.output.slurm

set -e

#####Intelmpi placement auto
# module load intel/18.1 intelmpi/2018.1.163
# export I_MPI_DOMAIN=auto
# export I_MPI_PIN_RESPECT_CPUSSET=0
# ulimit -s unlimited
# srun ../../bin/hello_mpi

#####Intelmpi avec placement pour mpirun
# module load intel/18.1 intelmpi/2018.1.163
# export SLURM_CPU_BIND=NONE
# export I_MPI_PIN=1
